Muhammad Arbab

VP System Integration and Deployments at Afiniti
Pakistan

Summary

“Developing a successful product is not just a matter of writing code.”

A results-driven, customer-focused, quick learner, articulate and analytical Senior IT Professional who can think “out of the box” and having a diverse working experience of more than 18 years. Strong in design and integration problem solving skills. Expert in Microsoft technologies, passionate about Open-source technologies, experienced in database analysis and design, having working experience in contact center, mobile technologies and project management concepts. Also skilled in developing an online marketing strategy that incorporates social media and latest online marketing trends. Strong written and verbal communication skills. Interested in solving complex problems.

I have experience in:

Contact Center Technologies
Business Process Management, ERP and CRM solutions
Financial Web Applications
E-commerce websites
Artificial Intelligence
E-Learning Portals
Social Media technologies
Mobile Application development
Social Sharing websites
Video Compression
Project Management

Experience

Afiniti

12 years 10 months

VP System Integration and Deployments
February 2023 - Present (2 years 8 months)

Director

January 2020 - February 2023 (3 years 2 months)

Global Platform Solution Architect

December 2012 - January 2020 (7 years 2 months)

Afiniti (formerly SATMAP) is the first major break-through technology to improve contact center performance in over 20 years. Afiniti's advance artificial intelligence technology enables contact centers in leading enterprises to increase revenue, reduce costs, and enhance customer satisfaction.

My key responsibilities include:

Lead global Avaya deployment and Integrations team.

Provide design solutions and remedy to architecture challenges.

Leading technical design meeting with Fortune 100 clients to understand their PABX environment.

Leading requirement specifications for new features in the product.

Preparing technical documentation required for each deployment.

Conducting UAT with the client after product deployment in their PABX system.

Working as a product owner and recommending product enhancement features.

Coordinating with different teams within the company to enhance capability and performance of the product.

Maintaining and provide access to internal PBX/ ACD labs to other teams.

Providing technical expertise on production issues, and resolving them with in Service Level Agreement.

Continuously striving for improving processes within the team and the company.

Some of the clients I have worked with includes T-Mobile, SPRINT, DirecTV, British Gas, Hilton Hotels & Resorts, Kwik Fit, Dell, E-Plus, Asurion, Verizon and O2.

Alchemy Technologies

Research Analyst

January 2012 - December 2012 (1 year)

Alchemy TreasuryOne:

Alchemy TreasuryOne is an integrated straight-through platform with rich functionality for Treasury operations of a bank. My responsibilities include new features implementation; improve application architecture to be flexible for future changes and to resolve issues reported by clients. This application is developed in ASP.NET with SQL Server at the backend.

FourQuants.com & FinanceTrainingCourse.com:

It is an elearning portal for finance professionals. I am managing all technical aspects of the site. The site is hosted on Amazon Elastic Cloud and utilizing Amazon Storage Services and Amazon CloudFront. I have also actively involved in optimizing site performance as well as improving the user experience based on the feedback. I have managed a team of 5 persons including a graphics designer, 2 SEO specialists and 2 developers.

Online Branding Technology Strategist:

I am online branding strategist for these websites. Being a first member of the team I have been looking over all aspects of these sites. From landing page optimization to increase conversions, I have been actively involved in all marketing as well as technical side of these sites. On Social Media side I have managed a team of 5 persons doing SEM, SEO, SMM, landing page optimization, bounce rate reduction and increasing sale.

I have done research and studying competition for these sites. So I suggested the idea of having an iBook to make our presence in the competition. I have also suggested many features while developing iPhone and Android app for FourQuants. Our iBook also featured under New and Noteworthy section of App Store.

Twovix

Software Architect & Evangelist

May 2010 - December 2011 (1 year 8 months)

Bismillah Email Service:

Bismillah.com is a unique email service. Users can have an email address like YourName@Bismillah.com. I was the first member of the team. From the technology selection, software development, web hosting to marketing, I had been actively involved in all phases of the product. The product uses Amazon Web Services. I had also managed a team of other two senior resources in the project.

- Bismillah Store

Bismillah Store was an e-commerce website for Muslims. It was developed in Magento (Open-source e-commerce solution).

- Easy Card Reader (iPhone App)

Easy Card Reader scans business card images and save extracted information to user's contact list. I have worked on business card detection

module along with the website's UI and marketing strategy. Xcode and Matlab is used in this R&D project.

- Bismillah.com (iPhone App)

Bismillah.com is a Namaz timings and Qibla direction finder iPhone application. I have worked on the algorithms of finings Namaz timings and Qibla direction based on latitude and longitude of the iPhone user.

Online Branding Technology Strategist:

I was also the online branding strategist for this website. We had more than 150 thousand users in 6 months. More than half a millions emails were exchanged monthly.

THK Solutions (Pvt) Limited

Senior Software Engineer

December 2009 - May 2010 (6 months)

Karachi

eTimeSheet:

This is a web based application developed for British Petroleum using ASP.Net (AJAX) and Oracle for the purpose of automating their attendance and incentive calculations.

- eProfile

This is a web based product developed for British Petroleum using ASP.Net (AJAX) and Oracle for the purpose of automating their HR processes. The application had three modules consisting of payroll, medical and leaves.

NixieLife

Founder

January 2008 - January 2010 (2 years 1 month)

This project started as my hobby and interest in social media. NixieLife was a video and photo sharing portal having some other unique and interesting features. From the idea to its implementation and from documentation to marketing, I had been actively working for NixieLife. I have stopped working on NixieLife now but sometimes do update its Facebook page <http://www.facebook.com/NixieLife>

Ultimus Pakistan

Senior Software Engineer

2006 - 2009 (3 years)

- Automation of Microsoft Office Documents as a Data Entry Forms (MS Word, EXCEL and InfoPath)

- SharePoint Services and Smart Attachments (for data forms emails etc)
Enhanced and managed the automation of uploading, downloading, modification and data transfer of the Microsoft Office documents to the Microsoft SharePoint Server.

- ULTIMUS Standard Forms (DotNet Forms)

Managed the Client end of ULTIMUS forms called Form Control Object (FCO). Data transfer between the client and the server end, custom .Net/Infragistics controls (textbox, data grid, calendar controls etc).

- FLOBOTS (Data flow robots)

FLOBOTS actions are based on the training of the user. Managed the modules for Word, Excel, OUTLOOK, EMAIL, DATABASE, SHAREPOINT, .NET, WEBSERVICE, XML and ASCI FLOBOTS.

- FORMAT CONVERTER

A module is developed for all ULTIMUS Data Entry forms (Standard, WORD, Excel etc) that will convert currency, date, time, percentage etc according to the system locale at client end.

- Themes for Infragistics Controls.

Also worked on the themes for the Infragistics controls that are also used in ULTIMUS Standard Forms

Streaming Networks

Internee

November 2005 - October 2006 (1 year)

Islamabad

- Implementation of H.264 / AVC:

H.264/AVC is a state of art video coding standard. I have written code for the core compression in C. During this project I worked on DCT transformation, Intra Prediction, Quantization and Variable Length Coding modules.
